Convenient Power Outlet

Almost all Kenyan residences have one thing in common no matter the age or status of their home the lack of electrical sockets available to them.

Buildings that are constructed of concrete and masonry make the installation of numerous sockets more difficult and costly. So builders cut back and often only put one socket per room. Large rooms or spaces may only have two sockets. This causes the residents to have very limited access to sockets and they are forced to extend cords around the rooms.

The other option is they have an electrician extend power from existing sockets which is expensive, messy and disruptive.

Tosheka introduces the convenience socket which allows anyone to easily install additional sockets without tools, or any special skills.

The convenience socket is a prewired power extension unit that is installed by mounting a wire way and socket box to the wall and plugging it into an existing socket. This unit can be installed in a matter of minutes and is a permanent safe installation.
